The Russell 2000 Growth Index is a market capitalization weighted index representing those stocks within the approximately 2000 smallest companies in the universe of U.S. equities that exhibit growth characteristics. This index does not incur expenses, is not available for investment and includes the reinvestment of dividends. Source for Active Share is Bloomberg. It is a measure of the percentage of holdings in a portfolio that differ from those of the benchmark. It is calculated by taking the sum of the absolute value of the differences of the weight of each holding in the portfolio versus the weight of each holding in the benchmark and dividing by two. Where the benchmark is the Russell 2000 Growth, the iShares Russell 2000 Growth ETF is used as a proxy. Where the S&P 500 is the benchmark, the iShares S&P 500 ETF is used as a proxy.

The Predecessor Fund was converted into the Fund on November 30, 2016. The Predecessor Fund's performance shown includes the deduction of the Predecessor Fund's actual operating expenses. In addition, the Predecessor Fund's performance shown has been recalculated using the management fee that applies to the Fund, which has the effect of reducing the Predecessor Fund's performance.
