

OSTERWEIS

FUNDS

July 21, 2017

Dear Shareholder,

During the second quarter of 2017, the Osterweis Strategic Investment Fund (the Fund) generated a total return of 2.71%, slightly outpacing the 2.43% return of the blended benchmark of 60% S&P 500 Index/40% Bloomberg Barclays U.S. Aggregate Bond Index (the Blended Benchmark).

Returns as of June 30, 2017	QTD	YTD	1 Year	5 Year	Since Inception (8/31/2010)
Osterweis Strategic Investment Fund	2.71%	6.83%	13.75%	9.40%	9.84%
60% S&P 500 Index/40% Bloomberg Barclays U.S. Aggregate Bond Index	2.43%	6.48%	10.33%	9.64%	10.47%
S&P 500 Index	3.09%	9.34%	17.90%	14.63%	15.46%
Bloomberg Barclays U.S. Aggregate Bond Index	1.45%	2.27%	-0.31%	2.21%	2.92%

Performance data quoted represent past performance; past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than the original investment. Current performance of the Fund may be lower or higher than the performance quoted. Performance data current to the most recent month end may be obtained by calling (866) 236-0050. An investment should not be made solely on returns. The Fund's gross expense ratio was 1.15% as of March 31, 2017.

As was widely expected, the Federal Reserve (the Fed) raised rates modestly in June, the fourth time since December 2015. What was somewhat surprising was the Fed's announcement that it plans to normalize (i.e., shrink) its portfolio of Treasury and mortgage securities. Markets digested the news and remained relatively stable in response. As discussed in the attached Investment Outlook, we believe the current low inflation environment is likely to persist as a result of durable counter-inflationary trends affecting consumers, technology and business. With inflation tame and employment rising, the outlook could continue to be favorable for equities, particularly if the Fed follows the current path of slow and deliberate increases.

At the end of the quarter the Fund held 56% in equities and 44% in fixed income and cash nearly inline with allocation at the end of the first quarter. We continue to focus our stock selection

in companies poised to grow earnings and dividends independent of broader economic trends. On the fixed income side, our focus remains largely on shorter duration, higher yielding bonds based on our belief that economic sensitivity is preferable to interest rate sensitivity in today's market.

We thank you for your continued confidence in our management.

Sincerely,

John Osterweis

Carl Kaufman

Information contained herein has been obtained from sources believed to be reliable, but is not guaranteed.

The Osterweis Strategic Investment Fund may invest in small- and mid-capitalization companies, which tend to have limited liquidity and greater price volatility than large-capitalization companies. The Fund may invest in foreign and emerging market securities, which involve greater volatility and political, economic and currency risks and differences in accounting methods. These risks may increase for emerging markets. The Fund may invest in Master Limited Partnerships, which involve risk related to energy prices, demand and changes in tax code. The Fund may invest in debt securities that are un-rated or rated below investment grade. Lower-rated securities may present an increased possibility of default, price volatility or illiquidity compared to higher-rated securities. Investments in debt securities typically decrease in value when interest rates rise. This risk is usually greater for longer-term debt securities. Higher turnover rates may result in increased transaction costs, which could impact performance. From time to time, the Fund may have concentrated positions in one or more sectors subjecting the Fund to sector emphasis risk. The Fund may also make investments in derivatives that may involve certain costs and risks such as those related to liquidity, interest rate, market, credit, management and the risk that a position could not be closed when most advantageous. Leverage may cause an increase or decrease in the value of the portfolio securities to be magnified and the Fund to be more volatile than if leverage was not used. Investments in preferred securities typically have an inverse relationship with changes in the prevailing interest rate. Investments in asset-backed and mortgage-backed securities include additional risks that investors should be aware of such as credit risk, prepayment risk, possible illiquidity and default, as well as increased susceptibility to adverse economic developments.

The S&P 500 Index is an unmanaged index that is widely regarded as the standard for measuring large-cap U.S. stock market performance.

The Bloomberg Barclays U.S. Aggregate Bond Index (BC Agg) is an unmanaged index which is widely regarded as the standard for measuring U.S. investment grade bond market performance.

These indices do not incur expenses and are not available for investment. These indices include reinvestment of dividends and/or interest income.

Duration measures the sensitivity of a fixed income security's price (or the aggregate market value of a portfolio of fixed income securities) to changes in interest rates. Fixed income securities with longer durations generally have more volatile prices than those of comparable quality with shorter durations.

Fund holdings are subject to change and should not be considered a recommendation to buy or sell any security.
